

## **CSA1413- COMPILER DESIGN FOR INTERMEDIATE LANGUAGE**

**NAME – AKILA S**

**REG NUMBER – 192424331**

In a class of Grade 3, Mathematics Teacher asked for the Acronym PEMDAS?. All of them are thinking for a while. A smart kid of the class Kishore of the class says it is Parentheses, Exponentiation, Multiplication, Division, Addition, Subtraction. Can you write a C Program to help the students to understand about the operator precedence parsing for an expression containing more than one operator, the order of evaluation depends on the order of operations.

### **PROGRAM:**

```
#include <stdio.h>
#include <ctype.h>
#include <stdlib.h>
#include <string.h>

int precedence(char op) {
    switch(op) {
        case '^': return 3;
        case '*':
        case '/': return 2;
        case '+':
        case '-': return 1;
        default: return 0;
    }
}

void parseExpression(char expr[]) {
    printf("Operator Precedence Parsing:\n");
    for(int i = 0; i < strlen(expr); i++) {
        if(isdigit(expr[i]))
    }
}
```

```
    printf("Operand: %c\n", expr[i]);  
    else if(strchr("+-*^", expr[i]))  
        printf("Operator: %c with precedence %d\n", expr[i], precedence(expr[i]));  
    }  
}  
  
int main() {  
    char expr[100];  
    printf("Enter expression: ");  
    scanf("%os", expr);  
    parseExpression(expr);  
    return 0;  
}
```

#### OUTPUT:

```
Enter expression: 2+3*4^2  
Operator Precedence Parsing:  
Operand: 2  
Operator: + with precedence 1  
Operand: 3  
Operator: * with precedence 2  
Operand: 4  
Operator: ^ with precedence 3  
Operand: 2
```

```
==== Code Execution Successful ===
```
